A NOTE FROM THE MANAGING PARTNER

Steve Sassi, Managing Partner

I've spent over 20 years in enterprise sales, at Informatica, Pivotree, and across dozens of Fortune 500 engagements. I've seen every wave of technology promise to "transform" the sales process. Most of them didn't.

AI is different. Your reps, using plain language prompts, in true collaboration with AI, changes everything.

Forget the hype. Forget the headlines. That's for the stock market. We're going to teach you the nitty-gritty practical details of why your reps using AI, with plain-language prompts, will change your bottom line. I've watched it change the day-to-day reality of what a sales rep can accomplish in an hour. The reps who are using AI correctly aren't working harder, they're working with a leverage that didn't exist even 6 months ago.

This playbook is not a tech manual. It's a sales leader's guide to understanding what AI actually does in a revenue organization, where it creates real competitive advantage, and how to bring your team along without the risk, the chaos, or the false starts.

The sales team that masters AI will win. This is how yours does it.

— Steve Sassi, Managing Partner, DTN Consulting

PART ONE

Why This Moment Matters

The Shift Is Already Happening

Your competitors' sales teams are already experimenting with AI. Some of them are doing it well. Most of them are doing it wrong, pasting prompts into ChatGPT and calling it a strategy. But a small percentage are using plain-language prompts and building real workflows that are changing how they prospect, prepare, follow up, and close.

That gap is going to widen fast.

The question for every sales leader right now is not *whether* to embrace AI. That decision has already been made by the market. The question is: **will your team be in front of this, or scrambling to catch up?**

What AI Actually Does for a Sales Team

Let's be precise, because this is where most of the confusion lives.

AI does not replace salespeople. It does not make calls, build relationships, or earn trust. What it does is eliminate the administrative burden that keeps your best reps from doing the things only humans can do.

Think about where your reps' time actually goes in a given week:

- Writing follow-up emails after meetings
- Researching prospects before calls
- Updating CRM records
- Preparing for QBRs and pipeline reviews
- Building custom decks and proposals
- Summarizing calls and sending recaps

These tasks are necessary. They are also not selling. AI can handle most of them, faster, more consistently, and without draining the energy your reps need to close.

The result is not a smaller team. It's a more effective one. We think of it as bringing back the dedicated executive assistant, except this one works around the clock, never forgets a detail, and integrates directly into the tools your team already uses.

PART TWO

The Five AI Use Cases That Are Changing Sales

These are the highest-impact areas where enterprise sales teams are deploying AI right now, listed in order of ease of implementation.

USE CASE 01

AI-Assisted Prospect Research

THE PROBLEM

Reps spend 30–60 minutes researching a prospect before a first call, pulling from LinkedIn, company websites, news, and CRM. The result is inconsistent and time-consuming.

THE AI SOLUTION

A well-designed AI workflow generates a comprehensive prospect brief in under two minutes, covering recent news, background, pain points, and talking points aligned to your solution.

THE RESULT

Reps walk into every call more prepared. Call quality improves. Conversion from first call to second meeting increases immediately.

USE CASE 02

AI-Powered Follow-Up and Email Drafting

THE PROBLEM

Post-meeting follow-up is critical, and one of the most inconsistently executed touchpoints. Some reps send detailed follow-ups in an hour. Others send generic notes two days later.

THE AI SOLUTION

An AI workflow triggered after a meeting drafts a personalized follow-up referencing specific conversation points, next steps, and relevant resources. The rep reviews and sends in minutes.

THE RESULT

Follow-up quality becomes consistent across the entire team. Speed to follow-up improves dramatically. Prospects receive a more professional, attentive experience every time.

USE CASE 03

AI-Driven Pipeline Management and Forecasting

THE PROBLEM

CRM hygiene is the bane of every sales leader's existence. Reps don't update records consistently. Forecast accuracy suffers. Deal reviews become exercises in data archaeology.

THE AI SOLUTION

AI workflows listen to call recordings, read email threads, and automatically update CRM records, flagging deals that have gone quiet and surfacing next steps that haven't been actioned.

THE RESULT

CRM data stays current without manual rep effort. Forecast accuracy improves. Sales leaders spend deal reviews on strategy, not data cleanup.

USE CASE 04

AI-Assisted Proposal and Deck Creation

THE PROBLEM

Building custom proposals is one of the most time-intensive tasks in enterprise sales. A rep might spend 4–8 hours building a proposal for a single deal.

THE AI SOLUTION

AI workflows take a deal brief as input and generate a first-draft proposal or deck, pre-populated with case studies, customized messaging, and a financial model. The rep refines rather than builds from scratch.

THE RESULT

Proposal creation drops from hours to minutes. Quality and consistency improve. Reps respond to RFPs faster and pursue more opportunities simultaneously.

USE CASE 05

Custom AI Agents Integrated Into Your Sales Stack

THE PROBLEM

Most sales teams use Salesforce or HubSpot, Outreach or Salesloft, LinkedIn Sales Navigator, Slack, and more. These tools don't talk to each other intelligently. Data sits in silos. Context is lost.

THE AI SOLUTION

Custom AI agents built across your existing stack, connecting your CRM, communication tools, calendar, and data sources, give your reps a single intelligent interface that surfaces the right information at the right moment.

THE RESULT

This is the executive assistant model at scale. The agent handles the orchestration. The rep handles the relationship. This is the use case that transforms the entire workflow.

"DTN Consulting held us accountable every single day. We came up with a plan together, and they made sure we stuck to it. The result helped us grow very quickly."

PART THREE

The DTN Triple A Approach

Every engagement we run, whether it's a one-day workshop or a full custom implementation, follows the same three-part framework.

A

Aim

Before we touch a single tool, we sit down with your leadership team and define success in measurable terms. Which part of your sales process has the most friction? What would a 20% reduction in admin time mean for your pipeline? The Aim phase ensures we're solving the right problem, not just implementing technology for its own sake.

A

Architecture

There is no universal AI sales solution. We design a solution that fits your team, your tools, your process, your culture, your compliance requirements. We select the right AI models, build the right integrations, and create the right experience for your reps. We come to this as sales practitioners, not technologists, and we know what reps will actually use.

A

Accountability

The most common failure in AI adoption isn't the technology. It's the change management. Teams get excited in the kickoff, struggle through the learning curve, and quietly revert to old habits within 90 days. We don't let that happen. We set targets, track them weekly, and hold ourselves, and your team, to them.

PART FOUR

AI Adoption Without the Risk

We hear the same concerns from sales leaders across every industry. They're valid. Here's how we address them.

"I'm worried about data security and compliance."

Every workflow we design is built with your data governance requirements in mind. We don't connect tools that shouldn't be connected, we don't store sensitive data in unsecured environments, and we work within your existing IT and legal frameworks. If you're in a regulated industry, we've worked in regulated environments.

"My reps won't adopt new tools."

The reason reps don't adopt new tools is usually one of two things: the tool doesn't actually make their job easier, or they weren't trained in a way that made it click. We solve both. Every workflow we build is tested with actual reps before rollout, and our training is built by salespeople, not instructional designers who've never run a pipeline review.

"We tried AI before and it didn't work."

Usually, what happened was that someone subscribed to a tool, turned it on, and hoped for the best. AI implementation requires intentional design. The tool is 20% of the outcome. The workflow, the training, and the accountability are the other 80%. That's what we provide.

"How do we know if it's working?"

We establish baseline metrics before we start and track against them throughout the engagement, including time-to-follow-up, call prep time, CRM update frequency, and pipeline coverage ratio. You'll know it's working because you'll see it in the numbers.

PART FIVE

How to Get Started

Getting started with AI sales enablement doesn't require a massive infrastructure overhaul or a six-month implementation. Most teams can see meaningful results in 30 to 60 days.

WK 1–2

Discovery & Aim

We meet with your sales leadership and a cross-section of reps. We map your current workflow, identify the highest-friction areas, and define success metrics that matter to your business.

WK 3–4

Design & Pilot

We design the first workflows and deploy them with a small pilot group, typically 3 to 5 reps. We gather feedback and refine before broader rollout.

WK 5–8

Rollout & Training

We roll out to the full team with structured training, manager enablement, and ongoing support. We track adoption metrics weekly and address friction in real time.

WK 9+

Optimization & Expansion

We review what's working, optimize underperforming workflows, and identify the next area to automate. Most teams find 2–3 additional high-value use cases within the first 90 days.

ABOUT DTN CONSULTING

The Team Behind the Playbook

Steve Sassi

Managing Partner & Principal Transformation Strategist

20+ years of enterprise sales leadership at Informatica, Pivotree, and Fortune 500 organizations. Recognized multiple times as a top global sales performer. Specializes in AI-powered go-to-market strategy and sales team enablement.

Nick Bianco

Partner & Technical Advisor

15+ years as an Enterprise IT Executive at IBM and Merative. Deep expertise in cloud architecture, AI integration, and enterprise systems. Co-Founder of Spiritus Coffee Co. Brings ground-level technical precision to every engagement.

Ready to Build Your AI-Enabled Sales Team?

Book a free 30-minute strategy call. We'll identify your highest-impact starting point and map out a 90-day plan to get there.
